

Task1 QA Report

**Please click on the title link to see bug screenshot*

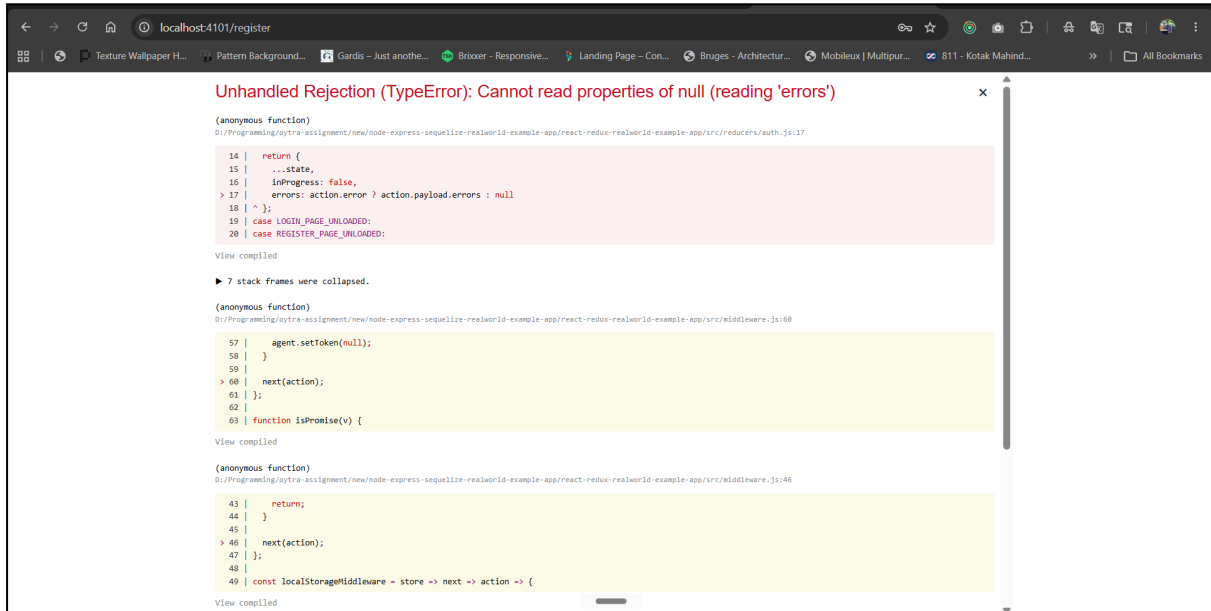

#	Title / Summary	Steps to Reproduce	Expected vs Actual	Severity	Suspected Cause
1	Duplicate registration crashes frontend application	1. Open Register page 2. Create account using valid email and username 3. Logout 4. Try registering again using same credentials	Expected: Proper validation message like “email already exists” should appear. Actual: Frontend crashes with Redux TypeError and full error screen appears.	 High	Frontend assumes action.payload.errors always exists and does not handle null validation response properly.
2	Invalid email input causes frontend UI crash	1. Open Register page 2. Enter invalid email like testing@123 3. Fill other fields 4. Click Sign Up	Expected: User should see proper email validation message. Actual: Application crashes and shows unhandled TypeError screen.	 High	Validation response from backend/frontend is not handled safely before rendering errors in Redux state.
3	Empty registration form submission crashes application	1. Open /register 2. Do not enter anything 3. Click “Sign Up”	Expected: Required field validation messages should appear. Actual: Full frontend crash screen appears with TypeError.	 High	Missing frontend validation and unsafe error handling for empty payload submission.
4	Empty articles can be published successfully	1. Open article editor 2. Leave title, description, and body empty 3. Click “Publish Article”	Expected: Article should not publish and validation errors should appear. Actual: Empty article gets published successfully.	 High	Backend/frontend validation for required article fields is missing or incomplete.
5	Empty comments can be submitted successfully	1. Open any article 2. Leave comment box empty 3. Click “Post Comment”	Expected: Empty comments should be blocked with validation message. Actual: Blank comments are posted successfully.	 Medium	Comment submission API does not validate empty input before saving.
6	Empty tags can be added during article creation	1. Open article editor 2. Add empty spaces or blank tag	Expected: Empty tags should be ignored or validated. Actual: Empty tags	 Medium	Tag input field does not trim or validate empty values before submission.

		values 3. Publish article	are added and displayed in article metadata.		
7	Settings page is accessible without authentication	1. Open browser in incognito mode 2. Visit http://localhost:4101/settings directly without login	Expected: User should be redirected to Sign In page. Actual: Settings page route is accessible without authentication.	 Medium	Missing frontend route protection for authenticated pages.
8	Non-existing profile route breaks UI instead of showing proper message	1. Open URL like http://localhost:4101/@kumar where user does not exist	Expected: Proper "User not found" message or 404 page should appear. Actual: UI breaks or behaves unexpectedly without meaningful feedback.	 Medium	Missing error handling for invalid/non-existing profile routes.
9	Oversized profile image breaks comment section layout	1. Upload large profile image 2. Open comments/profile section	Expected: Profile image should resize into proper avatar dimensions. Actual: Original large image size breaks layout and UI alignment.	 Low-Medium	Missing CSS constraints/max-width handling for avatar images.

Bug 7 - Settings page is accessible without authentication

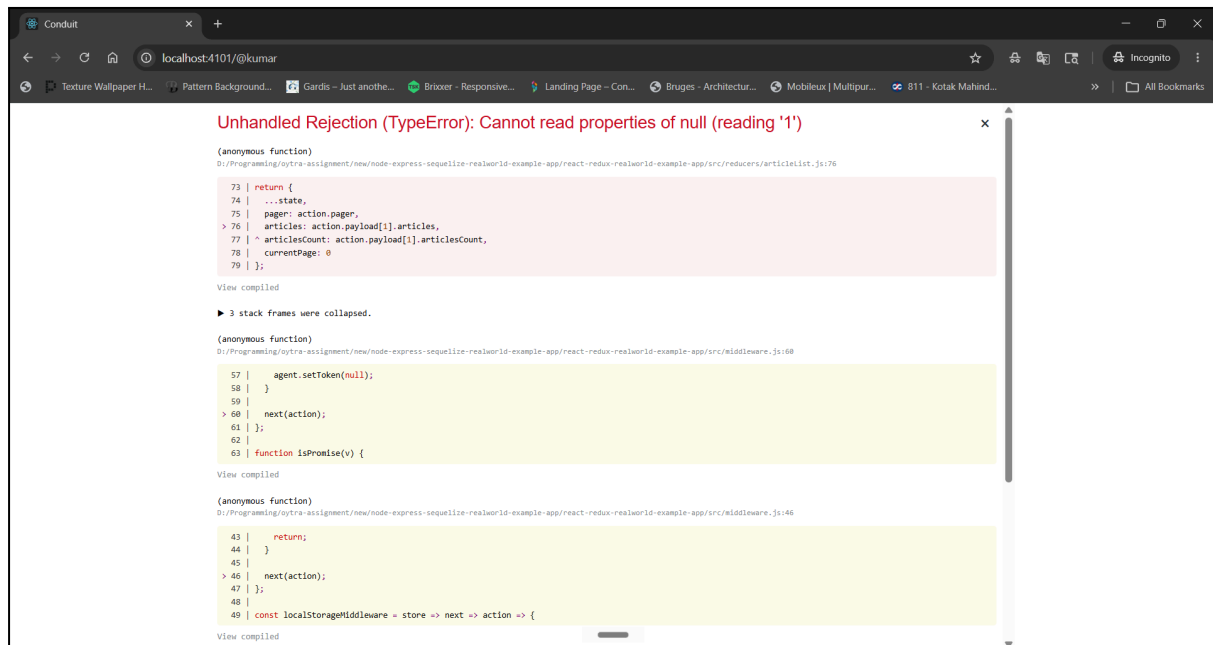

The screenshot shows a web browser window with the address bar displaying 'localhost:4101/settings'. The page title is 'Conduit'. The navigation menu includes links for 'Home', 'Sign in', and 'Sign up'. The main heading is 'Your Settings'. The settings form contains the following fields and controls:

- URL of profile picture
- Username
- Short bio about you (text area)
- Email
- New Password
- Update Settings button
- Or click here to logout. link

Unauthorized users can access the settings. But who's?? If I am trying to update things here, it is showing an exception.

We need to protect the route.

Bug 8 - Non-existing profile route breaks UI instead of showing proper message

This user does not exists. I should show a message that “User does not founder”, rather I am getting this exception

Bug 9 – Oversized profile image breaks comment section layout
